Affiliate Cookie Program

Summary

The affiliate cookie program is a process to allow partners to send leads to the DX buyflow to complete an order online. With this lead they would include a set of parameters in the URL to provide the buyflow with the required data.

When an order is then placed - information is passed back through with the order for data collection and reporting

This process is only for prospects and Fiber customers.

Partners

We have a set of 6 partners who will be using this process - so we need to build a flexible process so that we can add additional partners who may have slightly different requirements. We will be to build a flexible enough standard process that can be used for each scenario - with some required parameters and some optional parameters.

- Allconnect
- Centerfield
- Clearlink
- CJ (Commission Junction)
- ISG
- Updater

New URL parameters

Parameters	Required/Optional	Rule Set	Values	Summary
`Affprog`	REQUIRED	• Variable length • **Stored in cookie = Yes** • **Submitted with order = No**	• Allconnect • Centerfield • Clearlink • CJ • ISG • Updater	• Internal partner identifier. • This parameter identifies which sales partner is associated with the customer visit • Each partner will have some rules set for them. These will cover default values for optional fields and/or any unique logic required by that company.
	REQUIRED	• Currently has a standard length (8 Char) • **Stored in cookie = Yes**	8-digit numerical value. Example: 20000308, 20000660	• The sales code assigned by Brightspeed to each unique partner sales/lead gen

`Salescode`		• **Submitted with order = Yes**		program which is used by Brightspeed for order tracking, sales reporting and partner compensation associated with each partner sales lead
`CookieTime`	OPTIONAL	• Initial options are session or 30-days • Variable length • If parameter is NOT provided, use the default for the provided "Affprog" • **Stored in cookie = Yes** • **Submitted with order = No**	• Session • 30Day	• The length of time that a visitor is cookied on Brightspeed Internet Service Provider - Phone, TV & WiFi Plans ; session or specified length of time
`ACSID`	OPTIONAL	• Must be encoded as valid HTML • No additional rules for required structure or length • **Stored in cookie = Yes** • **Submitted with order = Yes**		• A unique value that is generated by each partner and used for the partner's own internal order tracking • Not used in the buyflow by Brightspeed but used only for the partner's tracking purposes
`ACFullAddress`	OPTIONAL	• Must be the full string representing the address encoded as valid HTML • If parameter is present - the buyflow /uas page will initiate a loop qual using this address • If parameter is not present - /uas page will present with nothing in the address entry box for the user to enter an address • **Stored in cookie = No** • **Submitted with order = BAU**	Full address that matches our AMS entries. Must include unit number Must be encoded as valid HTML	• This is the value for the full address of the customer who is being referred to Brightspeed Internet Service Provider - Phone, TV & WiFi Plans for order processing
	OPTIONAL	• Phone number would also stamp on cart orders for originating campaign attribution	10-digit numeric string with no special characters	1. Partner would set up a default toll free to be displayed in cart

`TFN` - Toll Free Number		• **Stored in cookie = Yes** • **Submitted with order = Yes**		a. Brightspeed would accept a phone number in the URL string to override the default campaign that ISG provides (ex. TFN=8888888888) b. Phone number passed in URL string would display throughout order flow - This is for customers who choose to abandon cart and call in

Functional Requirements

Use case	Description	Jira ticket
Affiliate parameters passed with URL	The link affiliate partners will use will append the parameters detailed above to the loop qual URL string. IF both required parameters are NOT present - the flow will continue like a normal buyflow. IF both required parameters are present - maintain all parameters in the URL for use as detailed in other use cases below.	DDE-2833: Parameters passed with URL NEW
Implement default values according to Affprog	If the parameters “CookieTime” or “TFN” are not provided in the URL - use the default values noted below according to the “Affprog” value passed.	DDE-2834: Implementing default values NEW
All Affiliate parameters passed through with order	All of the parameters (except fullAddress) that are provided in the URL need to be stored in a cookie. The length of the cookie will either be set by the “CookieTime” parameter or by the default for the AffProg The following parameters stored in the cookie (either from this session or a 30-day cookie saved) need to be passed with the order in the 622 packet with the other order data:	DDE-2835: All Affiliate parameters passed through with order NEW

	• Salescode • ACSID • TFN	
ACFullAddress will initiate a loop qual	When the URL has the parameter ACFullAddress present, it should appear populated in the address entry field of the /uas page. With the loop qual initiated so that the user does not need to enter an address or click the CTA NOTE: This address does not need to be stored in the cookie as it is just used to help initiate the loop qual	DDE-2836: ACFullAddress will initiate a loop qual NEW
Phone number from “TFN” will appear in the page header	We need to change the page header to reflect the phone number passed through the TFN parameter. If no TFN parameter is provided, show the default value according to the AffProg provided.	DDE-2837: Phone number from “TFN” parameter will appear in the page header NEW

Technical Solution

	Notes	Next
Cookie and Paramter passing affiliate information to sub-domains, and navigating other pages on the site.	1. Brightspeeddotcom has to be creating a was that cookie so that you know it can be associated with sub domains 2. Every time somebody else clicks on a link or anywhere that cookie needs to be read and that information be passed on as the affiliate information as long as the cookie is there, affiliate information needs to be passed on	☐ What is Max Cookie Lenght? If brightspeed.com and will include for cookie-related constraints. ☐ @Greg Schroeder to schedule time with Anand and Narsi to discuss Brightspeed.com Cookie Limits and existing cookie information to avoid 404. ☐ Anand to validate the POC for Cookie storing and encryption server side if possible and stored the local.

Open questions

	Question asked (Date and name)	Question	Answered (date and name)	Answer
1	Feb 27, 2025 @Sandhya Tondapu	Can the users change the address if an address is available form partners	Mar 3, 2025 @Lisa Leif	Yes, especially if loop qual results in a stop screen allowing users for a new address entry, user should be able to enter a new address. After user enters the buyflow, users should be able to change their address as BAU
2	Feb 27, 2025 @Sandhya Tondapu	There is a CJ related implementation that is separate from this affiliate program implementation. Since there are two separate cookies slated to be present, what is the course of action if both are present simultaneously during order time?		
3	Feb 27, 2025 @Sandhya Tondapu	During order purchase, the affiliate program information needs to be passed along with the order. Does this information go to BOSS OM? Or does the information need to be sent to some other system for affiliate reconciliation? How does affiliate reconciliation happen?		

4	`Mar 4, 2025` `@Gary Harr`	Can our commission system pick up “dotcom” orders with Salescodes		
5	`Mar 5, 2025` `@RAJESH CHINTAMANI`	Need to understand how data flows from OM/360 to DWH.		

Change log

- `Feb 18, 2025` - Initial document complete
- `Feb 26, 2025` - Technical section added
- `Mar 3, 2025` - Added parameters for the social media project, open questions section, and defaults for ISG
